

FIELD-TO-WORKFLOW DOCUMENT INTELLIGENCE

Snap the document. *Skip the spreadsheet.*

Bills of lading at the dock. Weight tags at the crush pad. COLAs on the compliance desk. Onysko WineTech reads them from a phone photo, classifies the type, extracts structured data, and routes it to the right workflow — without leaving the cellar.

HOW IT WORKS

/01 Snap from anywhere Camera opens inside the portal. Tap once to capture one or many pages — multi-page batches are auto-stitched.	/02 Classify each page AI identifies document type, supplier hints, and confidence scores. Multi-page batches are auto-grouped into proposed documents.	/03 Confirm the grouping User reviews proposed groupings at a glance. Low-confidence pages are flagged. Skips can be marked explicitly.	/04 Extract and route Structured data lands in the right workflow — BOLs to receiving, weight tags to harvest log, COLAs to compliance.
